First select question from here

Then you start giving marks from these buttons.

Evaluated marks will be shown here.

Here you can shift the pages.

After you have filled the marks you need to click on the answer sheet , in accordance with the question number , so that marks must be visible on answer sheet

Example is as shown.

Ans) Transformers works on the principle of Mutual Induction, the emf induced in a coil depends on the change of flux passing through that particular coil.

$$E = -N \frac{d\phi}{dt}$$

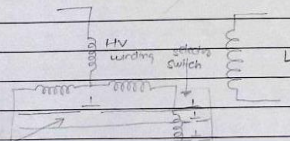

Now, since know $V_1 = N_1$
 $4 [4.0 \text{ Out of } 5] N_2$

Here V_1 represents the voltage & N_1 represents the voltage and current in the secondary side.

Now, in order to regulate the voltage tap changers are being provided in the transformer in order to get the desired output voltage on the secondary side. But the problem with tap changing is that we need to do this process frequently, so ON-Load Tap Changing Transformers are introduced so as to change the voltage without deenergising the transformer.

ON Load Tap Changing xmer are following types:

(i) on-Load tap Changing xmer with Recker:

The background is a light gray with abstract geometric patterns. On the left, there is a dense network of thin gray lines connecting small dark gray dots, forming a complex web. Scattered across the middle and right are several thin, light gray outlines of triangles of various sizes and orientations. In the top right corner, there are small, faint circles and dots, resembling a starry sky or a distant galaxy.

Thank You!
